CASCHA HH2090 GUITAR CABLE JACK 6.3 MONO / JACK 90 6.3 MONO 6M

Universal compatibility - suitable for various instruments!
The CASCHA guitar cable (length 6m) is a professional audio cable that can be used for a variety of instruments. It can be used to connect electrically amplified instruments such as electric guitars, basses, electric pianos or keyboards quickly and easily. It is also suitable for acoustic instruments with pickup systems (e.g. acoustic guitars).

Excellent sound quality and long durability!
The high-quality instrument cable transmits sound signals clearly and unaltered. The conductor material is surrounded by a special PVC sheath and prevents interference noise and unwanted cracking. The housing is resistant and wrapped with a special nylon reinforcement. This provides optimized kink protection and efficient strain relief. The angled plug reduces both the mechanical stress on the cable and the instrument. This significantly increases the durability.

Features:
- Professional instrument cable 6.3mm
- Length: 6m
- Color: Black
- Jack on angled jack
- Suitable for electric guitars, bass, electric piano, keyboard
- Also suitable for acoustic instruments with pick-up systems
- Clear and unadulterated sound quality
- High-quality conductor material
- Special PVC cover
- No noise or cracking sounds
- Robust housing with special nylon reinforcement
- Optimized bend protection
- Efficient strain relief
- Long service life
- Designed in Germany
