TB12 Screamin' Demon Trembkr White

11103-80-W The Screamin’ Demon is a medium output humbucker pickup designed to deliver crisp 80s sizzle with a scooped midrange. The idea was to create a pickup that had the articulate airiness of an old-school P.A.F., but with more growl and sizzle. We designed slightly overwound coils paired with an alnico 5 bar magnet and a mix of pole pieces that included one row of standard adjustable screws and one row of shorter Allen head screw. What you get is a big, open tone, with a treble emphasis that keeps your pick attack sounding articulate at any level of distortion. Originally designed as a bridge pickup, the 10k Screamin’ Demon also works great as a neck pickup when paired with a high output humbucker in the bridge. Pair the Screamin’ Demon bridge with the 59 or Jazz model neck humbuckers for a great 80s setup. Hand built in Santa Barbara, CA, the Screamin’ Demon medium output humbucker pickups use an alnico 5 bar magnet, nickel silver bottom plate, 4-conductor lead wire for multiple wiring options, are vacuum wax potted for squeal-free performance, and are available in standard humbucker or Trembucker spacing.
