KOCH MULTITONE 100 COMBO

The MULTITONE from KOCH, a "state-of-the-art" all-tube guitar amplifier of the highest quality. The MULTITONE has been designed and built by people who - from their own experience as musicians - take guitar sound and quality very seriously. This product was designed and built to meet all professional standards: an amp which sounds fantastic and is easy to operate, built in such a way that it will serve you for many years to come.
This robust 3 channel amp with accutronics long tank reverb and 5 button footswitch will inspire you to play! The classic-styled Pre-channel with tone circuitry in the preamps input stage houses the 'Clean' and 'Drive' channels, dedicated bass- mid- treble controls and a 3 way 'Bright'switch. Clean channels stay clean even at high volume levels, and the 'Drive' channel is like having a 'drive pedal' installed inside your amplifier. The post-channel, with tone circuitry in the preamp's output stage, houses the 'Gain' channel, dedicated presence-bass- mid- treble controls and a 2 way 'mid shift' switch. This channel will take you from a fat, slightly edgy clean sound, to absolute high-gain melt-down. Koch has added a 3-way speaker damping switch, serial & parallel effects loops, and a penthode/ triode switch to run the amp at 100% power or 50% power. Normal and bright Clean inputs allow for pickup selection and as always, a direct output for recording.

A very versatile amp.

Features:

• Ch. 1 - Blackface Fender cleans
• Ch. 2 - Dumble type of sound, nice and crunchy
• Ch. 3 - Hot Rodded JCM 800 sound, can get into serious gain
