BEHRINGER DI 400P

Introducing the Ultra-Compact DI-Boxes from BEHRINGER

There are times when you will want to connect certain sound sources straight to other audio gear, be it for a live performance or a studio session. A direct connection between audio equipment can be a challenge though: technical problems crop up that'll corrupt the signal.

The DI400P lets you connect instruments or amplifier outputs. It converts any unbalanced signal to a balanced signal and eliminates unwanted noise. With its high-performance transformer, it also allows you to use very long cables without the loss of high frequencies.

This is the sort of medicine that'll cure headaches in your studio or on stage.

Connect your guitar or bass directly to your mixer without losing tone due to impedance mismatches, long cables and cycle hum
Converts any unbalanced line-level signal to balanced mic-level output
Provides impedance and signal matching for the direct connection of instruments to amplifiers and mixers
Allows the use of long cables without losing high frequencies
Thru/Out jack lets you send the unbalanced signal to an onstage amplifier while the balanced signal is routed to the mixer
Ground lift switch eliminates typical ground loop problems such as hum
High-performance transformer for ultimate signal integrity
Ultra-compact, all-metal and road-suitable housing
High-quality components and exceptionally rugged construction ensure long life and durability
Conceived and designed by BEHRINGER Germany
