RADIAL TONEBONE TRIMODE DISTORTION

The Trimode is a high performance tube distortion pedal designed for professional stage use. It combines a proprietary dual-drive gain stage with a 12AX7 tube to deliver the warm tone, feel and dynamics of a real tube amplifier. Turn down your guitar and the Trimode cleans up. Dig into the notes and it reacts to the subtleties of every nuance.

Derived from the popular Tonebone Classic, the Trimode is based on the heritage of America's finest tube amplifiers. The powerful feature set delivers five decades of tone from the slight overdrive of early rock & roll to the blistering power tones of today's modified high gain amps. With this kind of power, you can create tones that will make your voice unique and your individuality shine through.

As the name implies, Trimode has three settings: it begins with a 'True-Bypass clean mode' that delivers the natural tone of your guitar plugged directly to your amp. Hit the footswitch to engage the 'Rhythm mode' where you can adjust the distortion, mid range and output level for the perfect rhythm setting. Toggle to the 'Solo mode' and optimize your sound for sizzling leads that cut through with incredible control and sustain for days. The Trimode goes one step further with a built-in effects loop on the solo channel that lets you instantly engage your delay with a single foot action to deliver a seriously professional stage performance.

The Tonebone Trimode... tremendously versatile, incredibly dynamic, extremely efficient... with the tube warmth and character to let your individuality shine through.
