JOYO JF-323 IRONMAN WOODEN SOUND MINI PEDAL

The JOYO JF-323 Wooden Sound Acoustic Simulator pedal it is set to impress with its simulation of an acoustic sounding guitar. Turn your electric guitar into an acoustic one at the press of a button. With the latest mini pedal from JOYO the Wooden Sound Acoustic Simulator effect expands the range of your guitar tone without swapping out your guitar mid track, or compensating on the mix.

With four controls, one each to adjust the High, Mid, Bass and Volume levels you can dial in the exact tone that you want. An amazingly nice pedal that punches above it's price range. Unlike a lot of acoustic simulator pedals this one actually sounds like you are playing an acoustic through a PA rather than just sounding thin and trebly. Add some reverb, delay and chorus and you've got a perfect acoustic sound without having to swap guitars midway through your song.

A pedal that's sure to leave other guitarists asking how you did it and leave you wondering why you'd turned it off. The Wooden Sound really leaves its mark, when you do turn it off you really appreciate how much it was actually doing to your tone. Perfect to let those cleanly strummed passages in songs really sound their best. It even does a good job of turning your bass into an Acoustic for those quiet songs in your set!!!

- Product Dimension: 7.3 x 4.3 x 5 cm
- Item Weight 220 g
- Controls: High, Mid, Bass and Volume.

Features:
- True Bypass
- Input Impedance:1m Ohm
- Output Impedance:50k
