DIGITECH GENESIS 3

The Digitech GENESIS 3™ is a guitar effect unit designed to be used primarily in a recording studio environment. This is kind of a niche market, but that doesn't mean a product like this doesn't have merit. Sometimes it's hard to get a good electric guitar sound laid down when recording' and capturing the personal tone that many guitarists spend years trying to perfect, is an art in itself. The right stomp box or pedal can make recording easier. Many of the new higher end multi-effect pedals are coming with digital outs that are included primarily for recording. The GENESIS 3™ is basically one of Digitech's higher end guitar processor pedals, turned into a desktop unit. It fits nicely on a recording desk or a music stand. Digitech has thought this one out pretty thoroughly, a fact that quickly became evident within a few minutes of using the GENESIS 3™.
