AUDIX D6 DYNAMIC INSTRUMENT MICROPHONE

Professional Dynamic Instrument Microphone

The D6 dynamic instrument microphone is used for stage, studio and broadcast applications. Designed with a cardioid pickup pattern for isolation and feedback control, the D6 drum microphone is equipped with a VLM™ diaphragm for natural, accurate sound reproduction.

Lightweight, compact and easy to position, the D6 cardioid microphone is an excellent choice for miking instruments requiring extended low frequency reproduction such as kick drums, large toms and bass cabinets. The D6's transformer less design, low impedance and balanced output allow for interference-free performance.

Designed, assembled, and tested by Audix in the USA.

Applications

- Live stage, recording
- Kick drum
- Floor tom
- Bass cabinets
- Leslie bottom

Specifications:

- Type: Dynamic
- Polar Pattern: Cardioid
- Frequency Response: 30Hz - 15kHz
- Impedance: 280 ohms
- Sensitivity: .8 mV/Pa @ 80Hz
