SELA SE 099 BASS CAJON EXTRA STRONG

The Sela Bass Cajon offers percussionists an additional bass boost for their performance. It has two playing areas: the Sela Hard Splash playing surface on the front responds easily and offers the Sela-typical separation of snare and bass. The extra strong playing surface on the back is made of birch and is specially designed for the use of a bass drum pedal. Create a balanced and powerful bass drum sound on the back while performing with your hands on the front.

With its consistent sound development, the Sela Bass Cajon is ideal for the use in the studio or on stage. The sound of the Sela Snare System can be dampened or amplified according to your personal preference. If you want to you can even remove it easily. In combination with the individually adjustable clap corners, this results in a big variety of sound possibilities.
