SABIAN AAX FREQ CRASH 16"

SABIAN’s FREQ design is an exclusive dual-lathing process that results in unique, intensely-cutting crashes that deliver quick bursts of hi-frequency tone, and fill the stage with big, open sound. Although most rock cymbals cut with focused high-pitched tone generated by the bell, the 16” SABIAN Freq Crash gets its boosted cut from the exclusive FREQ dual-lathing process. Once you hear this crash, you’ll want to get your FREQ on!
