SEYMOUR DUNCAN ANTIQUITY JAZZ BASS - NECK

The neck position is wound "top going" and North polarity. When used in combination with the bridge pickup will be hum-canceling. Both pickups have the traditional pole spacing. The magnets are protruding from the top and bottom of the flatwork for a smooth even response. Each pickup is recreated to fit in your old classic and comes with black aged pickup cover, schematic, and mounting screws. Hookup wire is the classic "push back" c braid wire.
