The potent PCI mkII & Express card for built-in PowerCore plug-in acceleration

The PowerCore PCI mkII fits into a standard PCI/PCI-X slot and the PowerCore Express fits into a PCI Express slot – that's the only difference between the two cards. Both of them come with the same amount of plug-ins and feature set and they are a potent combination between 14 state-of-the-art processing plug-ins and 4 x 150 mHz DSPs. The plug-in bundle that comes with the PCI and the Express card, consists of the 14 plug-ins known from PowerCore FireWire and PowerCore X8, leaving you with a bunch of versatile and professional tools, and it sports the same performance as the rack-based PowerCore FireWire. Pick'n' choose your favorite plug-ins.

Use the \$500 plug-in voucher, which is included with PowerCore Express for a limited time, to redeem optional plug-ins from the TC-Now online store.

Designed by professionals, for professionals

PowerCore PCI mkII and PowerCore Express are designed for professional audio tasks, and with the included and optional plug-ins, they can be optimized for a variety of applications such as mastering, vocal processing and sound design. The PCI card and the Express card are the obvious choice for any professional sound engineer or producer with a VST, AU or RTAS compatible audio system.

When you just want the sound of quality

For songwriters, composers and everybody else that care about sound quality and serious plug-ins, the PowerCore platform is the perfect match. The blue PowerCore PCI mkII card and the black PowerCore Express card deliver the sound of quality right into your studio. It complements the very highest of standards and excels via the unique and renowned tools that it has to offer. If you're looking for the ultimate tool that will enhance your creativity and give your productions superior audio quality, you should look no further.

It just can't get flexible enough

Integrating perfectly with most VST, AU and RTAS applications, we've secured your freedom to choose your favourite application for music or film editing. On top of that we're constantly supplying new and professional plug-ins, most notably 1:1 ports of original and undiluted algorithms from the System 6000. 3rd party developers are adding to the stack, which gives you the choice of the best tools and instruments around.

PowerCore Compatibility

PowerCore and VST

PowerCore is compatible with all VST host applications, such as Nuendo, Ableton Live, Cubase, Sonar, Wavelab, Acid, Sound Forge, a number of film- & post applications and more.

This means that you can use all PowerCore plug-ins within these programs.

PowerCore and Audio Units

PowerCore is compatible with Apple's Audio Units (AU) format.

This means that PowerCore plug-ins will run in all AU compatible host applications such as Logic, GarageBand and a number of film- & post applications.

PowerCore and RTAS (Pro Tools)

PowerCore is compatible with RTAS (Pro Tools) via a so called wrapper.

This means that in order to run PowerCore plug-ins from within ProTools, you'll need to obtain the wrapper. The wrapper is able to translate the VST format into RTAS, and this means that you can use all PowerCore plug-ins within RTAS compatible host applications, such as Pro Tools.

Included Plug-ins

PowerCore FireWire, PowerCore Compact, PowerCore PCI mkII and PowerCore Express deliver an array of powerful tools right out of the box. The virtual processors that are included with these hardware choices feature the most complete collection of versatile processing available. Please note that PowerCore Unplugged is the same piece of hardware as PowerCore PCI mkII but without the included plug-ins.
