KME QL1215 LINE ARRAY 2x8"+2x1" - 90°x6° - 400/800W/8

K.M.E. QL 1215 - 2 way down fill unit

The line source element QL 1215 completes the system with a wide radiating unit which is mainly used for down fill applications. The reliable element (2 x 8" neodymium speaker with AQF acoustic filter, modified K.M.E. wave former with 2 x 1" compression driver) was adopted from the QL 906, a new feature is the dispersion of 120° horizontal and 15° vertical.

2- way line source unit
excellent acoustic coupling
wide horizontal dispersion, precise vertical scalability through the whole frequency excellent power-to-size ratio
extreme mechanical load & weather stability through PU coating
low weight due to neodymium speaker
Quick Release hardware for save and easy handling (Fly & Stack)
