KME VL 240 SATELLITE/STAGE MONITOR

VL 240
Mobility is trump! Even the new active loudspeaker VL 240 does not make a difference. Consequently developed to portable requirements, the VL 240 can be used as top unit or stage monitor. The dynamic linked input/amplifier limiter monitors the input signal for clipping and therefore removes invalid levels for protection of the speakers and amplifiers. So a clean signal transmission and optimal protection of the speakers is guaranteed.
