Internal Mixing Tutorial - Volume I and II

The Internal Mixing DVD-ROM tutorial series is an essential resource for disk recording application users who do their mixing mainly inside their workstation. Providing hands-on strategies for using computers to make powerful, clear and perfectly balanced mixes, Internal Mixing supports you in creating them without using expensive outboard equipment. Internal Mixing includes English, French, Spanish and German soundtracks.

With more than 160 minutes of video in Volume I and over 180 minutes of video on Volume II, Internal Mixing covers tried and tested methods for achieving that often elusive sound known from professionally produced CDs and DVDs. Covering a huge range of issues surrounding mixes, Internal Mixing offers valuable insights into topics such as native and DSP-based plug-ins, the concepts behind positioning instruments and voices within a three dimensional sound field, frequency spaces, optimized mixing workflow and much, much more.
