GK 800RB HEAD

GALLIEN KRUEGER 800RB HEAD

Here's an excellent bass amp that gives your instrument the full range of tone and a powerful punch it deserves. A variable crossover lets you set up the Gallien-Krueger 800RB bass amp head's dual amplifiers to bring out the perfect mix of boom and snap. A dedicated 300-watt amp power amp circuit drives the lows, while a 100-watt amp takes care of the highs, so the frequencies that need to most power don't stave the rest of your sound. On the way in, the GK 800RB lets you completely shape the sound of your bass. A 4-band EQ gives you conventional control of frequencies, whereas a switchable contour adjustment and footswitchable G.I.V.E. technology valve emulation let you add character and grit to your tone. When it's time to step up your bass tone, it's time to pick up a Gallien-Krueger 800RB bass amp head!

Features:

- 300-watts (4 ohms) low-frequency amp, 100-watt high amp
- Bi-amp (switchable to fullrange mode) with selectable crossover frequency
- Active 4-band EQ
- Switchabe contour, low cut, and high boost
- Effects loop
- XLR direct out
