DAMAGE CONTROL WOMANIZER DISTORTION

DAMAGE CONTROL WOMANIZER DISTORTION

The Womanizer embodies a broad range of tones coveted by generations of classic rock guitarists. With pure Class A Distortion powered by cascading tube gain-stage circuits, the dual 12AX7 topology is bursting at the seams with unbridled sonic juice. The overdrive section cries out with all the beautiful and emotive tonal character that any journeyman could desire, while its multiple sonic moods can speak softly from a delicate and subtle whisper to a fat and frenzied scream of emotion. Like the Demonizer, the Womanizer is also equipped with analog Opto-compression, pre/post EQ, and magic eye biofeedback meter. The Womanizer's absurd range of analog tube tones and customization is unmatched. At Damage Control, we hear you. We hear all the bitching and moaning about inferior distortion devices that fail to deliver on the silly promise that they sounds as good as TUBES. When your guitar playing is about your soul, express it loud and express it clear. Got soul? Damage Control!
