AHB2b Blackouts Metal HB Blk

11106-40-B Relentless. Only for those serious metal players who will accept nothing less than our highest output active bridge pickup. The Blackouts Metal humbucker is the reincarnation of our original LiveWire Metal humbucker. With its infamous brain melting output level and headroom, this pickup is so hot that we added a feature that gives you access to a second, moderate, output level. The Blackouts Metal comes from the factory with a slide-on shunt connecting the two pins. Simply remove the shunt and the pickup will be in moderate output mode. You can also run the two pins to a pushpull or mini-toggle switch so you can switch between the two output levels for a built-in boost switch. This pickup is thick and crunchy, and will provide a massively saturated distortion tone with tons of string sensitivity. Lock in with the double bass and lay waste to those who stand before you. Comes with pots, hardware, quick-connector cables, capacitor (active pickups require a special cap value), output jack, battery clip, and wire needed for installation. If your guitar already has active pickups with quick-connector cables installed, you should be able to simply unplug them and plug in your Blackouts.
