PA-STK1n Parallel Axis Stack

11102-76 Stacked Parallel Axis single coil for noiseless Strat-like tone that is bright and clear, with a snappy treble attack. The Parallel Axis Stack is a noiseless Stratocaster pickup that takes the innovative dual-pole design of the Parallel Axis Trembucker and combines it with our patented Stack technology to deliver a bright, crisp single coil tone. This pickup mounts into any Stratocaster-sized pickup slot and is a great match in the neck or middle pickup for any of our PATB bridge models. Like all Trembuckers, the Parallel Axis Stack has a wider pole piece spacing, perfect for symmetrical positioning under the strings of guitars with a tremolo or wide spaced hard tail bridge (2" or wider from the center of the Low E to High E directly over the bridge pickup). Hand made in Santa Barbara, CA, the Parallel Axis Stack noiseless Strat pickup uses our unique dual-pole design for added sustain, a large ceramic bar magnet, 4-conductor wire for multiple wiring options, and is vacuum wax potted for squeal free operation.
