7Str Invader Nk, Amt, Soapbar

11102-29-A-SB-7Str High output with a huge, unapologetic sound, the 7 and 8-String Active Mount Invader humbuckers deliver crushing metal tone for extended range guitars routed for active humbuckers. Installing an Invader changes your guitar’s DNA. No matter how dangerous your stock pickup claims to sound, the Invader will transform your guitar into the mean, heavy-sounding beast you always knew it could be. The Invader’s power comes from the combination of specially overwound coils, three large ceramic magnets, and its striking, oversized metal oxide pole pieces. These unique pole pieces expand the overall magnetic field and widen the frequency spectrum, which is why every note played through an Invader sounds so rich and massive. The ceramic magnets add depth and clarity while the large hex caps deliver smooth string-to-string balance. The Invader delivers the thickest, deepest low-end response of any passive pickup we make. Chords sound almost subsonic with lower tunings, but balance nicely with the crunchy treble, keeping everything well defined. While the Invader bridge looks mean and vicious, because it is mean and vicious, the Invader neck humbucker is surprisingly warm and smooth, despite its intimidating looks, and yields a thick crunch and moaning sustain. This passive humbucker comes with a black soapbar cover featuring two rows of exposed hex poles for a modern active look that is a quick retrofit into any 7 or 8-string guitar with an active pickup rout.Hand built in our Santa Barbara, CA factory, the Invader Active Mount features three large ceramic bar magnets, oversized metal oxide poles, nickel silver bottom plate, 4-conductor lead wire for multiple wiring options, and is vacuum wax potted for squeal-free performance.
