STKS9b Hot Stack Plus Black

11203-13-Bc Our highest output noiseless Strat pickup that’s great in the bridge position and provides rich and powerful midrange harmonics. The Hot Stack Plus for Strat is our high output noiseless bridge pickup that gives you big output, and lots of midrange harmonics. Designed specifically for the bridge position, the high output coils, and alnico 5 rods deliver a full, punchy sound that will add versatility and power to any Strat, while retaining traditional looks. Chords will sound full and rich, while single notes will cut through much more easily. Back in the 80s we patented a special bottom coil that actually injects negative hum into the pickup circuit, and, at the end of the production process, we fine tune each pickup for maximum noise cancelation. You get all the great qualities a classic Strat pickup, and none of the hum. Pairs great with our Custom Stack Plus Strat and Vintage Hot Stack Plus Strat in the neck and middle positions for a versatile, hum-canceling Strat in any position. Hand built in Santa Barbara, CA, the Hot Stack Plus noiseless Strat pickups use hand ground alnico 5 rod magnets and comes with a splittable 3-conductor lead wire to give you access to true single coil operation. Each pickup is wax potted for squeal free performance.
