APB1 ProActv for PBass

11406-01 Active P Bass pickup with a modern look and voicing that delivers increased output and punch. Here’s a modern take on the active P bass pickup. It boasts a wide tonal range with a sharper attack and more punch, yet without the brittleness that is typical of some active pickups. Harder rock players love the aggressive feel of this pickup. If you are a fingerstyle player, you’ll appreciate the response as well. The design is based on the old Seymour Duncan Active EQ Switch pickups. While we no longer build them with the little switches, we took the most popular switch settings and hard wired it for convenience. Has a modern look with a no poles cover. Hand built in Santa Barbara, CA, the Pro Acrtive P Bass pickups use ceramic magnets, and come with 3-conductor lead wire.
