APJ1 ProActv for PJ Bass

11406-02 Active precision jazz bass pickup set with a modern look and voicing that delivers increased output and punch. The Pro Active PJ is a balanced pair of active precision jazz bass pickups engineered for bigger, more aggressive tones with a modern look and feel. This set excels at being clear and articulate without being brittle. The low end is there, but the lower mid frequencies are king of this pair, providing the right balance of attack and authority to sit in the mix just right. They have a modern no pole piece look, and increased output. Hand made in Santa Barbara, CA, the Pro Active PJ pickups use ceramic magnets, and come with 3-conductor lead wire.
